

SimCorp Dimension® NAV Optimisation Service

Service Overview

For investment managers, delivering accurate and timely NAV data into the organisation is critical for the business. With pressure from strict publication deadlines, it becomes particularly challenging to ensure NAV accuracy and timeliness across a wide range of funds. Processes need to ensure operational efficiency, as well as a demonstrable level of control. The cost of NAV errors can be significant both in reputational damage and compensation to investors.

With this backdrop we have developed our NAV Optimisation Service specifically for users of SimCorp Dimension, based on our Axxelerator™ Methodology. The Axxsys team are highly skilled industry professionals with detailed knowledge of SimCorp Dimension and have worked on multiple NAV Optimisation projects in the UK, Mainland Europe and North America. Our team focus on a deep dive analysis of processes and workflows to identify areas of improvement in running times and error resolution times.

Axxsys™ Approach

We provide a flexible engagement model that is tailored to the needs of the business. It can be deployed for the whole project or at any point in the NAV Optimisation process. Our service is based on the Axxsys Axxelerator™ methodology that incorporates a detailed set of tools, templates and optimised operational processes to deliver accurate production of start of day NAV data.

Working with the client's business and technology teams we set up a series of cross-functional and workstream aligned workshops to examine the business process flows identifying pain points and blockages. We also carry out a deep dive analysis of the SimCorp Dimension NAV configurations. The outcome of the workshops and the system review is a series of detailed recommendations and a plan for their implementation.

Our proven methodology is based on two distinct phases which will determine the design of the final solution:

Preparation

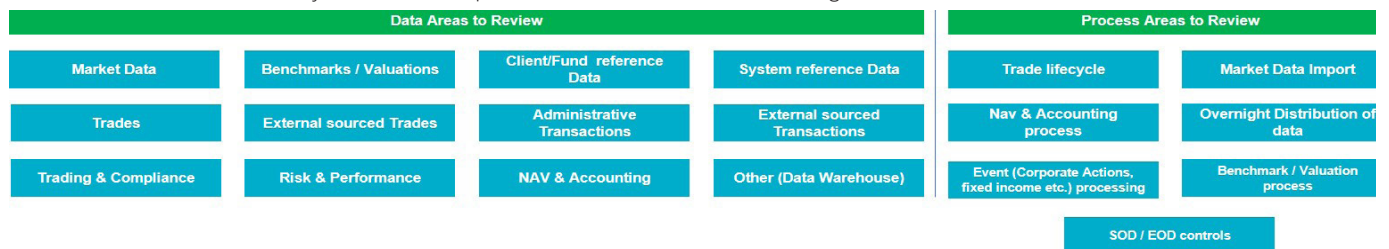

Onsite / Remote workshops with business and technology representatives to walk-through the following areas:

- Daily Operations and Runbook
- Review of process dependencies and sequences
- Review of Common Mistakes and Inconsistencies
- Pre-NAV SL Dashboard
- Daily NAV Workflow
- Market Data Validation
- NAV Calculation

Deep Analysis & Solutions Identified

- Analyse relevant processes, data areas and infrastructure
- Analyse list of findings including pain points and process dependencies
- Online / offline analysis of key SCD configuration items
- Analysis of recorded exceptions, errors and execution time for Batch and STP processes
- Recommendations benchmarked against experience from previous SCD engagements
- System performance tests designed and executed to establish the viability of proposed NAV optimisation changes
- Delivery of recommendations, including costed implementation plan for the proposed changes

The detailed reviews and analysis of data and processes would cover the following areas:

Why partner with Axxsys Consulting?

Some of the worlds leading investment managers and largest SimCorp Dimension clients have partnered with Axxsys for NAV Optimisation projects due to our **strong reputation and extensive experience in the market** which is based on our:
